

Introducing... Crown HVO

100% Renewable

100% Sustainable

100% Carbon Offset

Crown HVO is a synthetic, premium quality biofuel made from 100% renewable raw materials. Available nationwide within 48 hours, the FAME-free fuel is compatible for use in all modern diesel engines and off-road machinery.

Using Crown HVO produces net-zero carbon emissions, significantly reducing your operational carbon footprint.

WHY IS HVO BIODIESEL BREAKING NEW GROUND?

- ✓ Reduce carbon emissions by up to 90%: significantly better for the environment than regular diesel or biodiesel
- ✓ 100% renewable, sustainable and carbon offset: synthesised from waste fats and vegetable oils, significantly reducing CO₂, NO_x, PM and CO emissions
- ✓ Drop-in replacement for regular diesel: chemically similar to EN590 diesel, meaning it can be used as a direct replacement for regular diesel
- ✓ Excellent cold weather performance: high cetane number (85) and low cloud point (-32°C) provides better starting performance, clean combustion and less chance of waxing in extreme temperatures
- ✓ High flashpoint: improved safety, storage and handling compared to regular diesel
- ✓ Reduced need for regular testing: oxygen and other impurities are removed during the production process, eliminating the key vectors for fuel degradation and increasing shelf life to around 10 years
